EDUCATION

- **Harvard University, School of Engineering & Applied Sciences** Cambridge, MA
Master of Science in Data Science; GPA: 4.0
Sep 2018 – Present
 - **Awards:** Applied Computation Scholarship
- **University of California at Berkeley, College of Engineering** Berkeley, CA
Bachelor of Science in Industrial Engineering & Operations Research; GPA: 3.9
Sep 2012 – May 2016
 - **Awards:** High Honors, Phi Beta Kappa, Dean's List (2012-2016)

RELEVANT EXPERIENCE

- **Harvard University** Cambridge, MA
Graduate Researcher
Nov 2018 – Present
 - **Deep Learning in Physics:** Researched and developed methods for solving Navier-Stokes equations using unsupervised neural networks. Researching methods to train GANs to solve differential equations (e.g. harmonic oscillator, Burgers' equation) in an unsupervised fashion.
- **Amazon Robotics** Boston, MA
Data Science Intern
Jun 2019 - Aug 2019
 - **Data Engineering:** Built automated, scalable data pipeline for big data queries (100+ billion rows), data merging, data cleaning, and data transformation. Tech stack: Python, Apache Spark, AWS EMR/S3/Athena, Boto, Dask, Pandas
 - **Data Science:** Developed modular machine learning library for internal product. Included automatic data filtering, feature selection, linear models, random forests, gradient boosted trees, and feedforward neural networks. Leveraged interpretability algorithms (e.g. feature importance, accumulated local effects, Shapley additive explanations) for model understanding. Tech stack: Python, AWS EC2/S3, Pandas, NumPy, scikit-learn, XGBoost, Keras
 - **Data Product:** Built user-interface allowing non-technical users to easily train machine learning models for a broad set of tasks. Demonstrated efficacy and efficiency through targeted internal use cases. Tech stack: Python, Jupyter Notebook, IPython Widgets
- **Hubdoc** Toronto, Canada
Lead Data Scientist
Jan 2017 – Jul 2018
 - **Production Deep Learning:** Developed and deployed production deep learning system using LSTMs & CNNs for entity extraction and text classification of financial documents. Models trained on over 10 TB of text and image documents. Extraction time reduced from 24 hours to 5 seconds. Cost savings estimated at \$2MM/year. Tech stack: Python, Keras, Tensorflow-Serving, PostgreSQL, AWS EC2
 - **Data Science:** Conducted business and engineering analyses: e.g. prediction of labor requirements and anomaly detection of web scrapers. Wrote reports and built data visualizations for company intranet in JavaScript D3
 - **Leadership:** Regularly presented results and recommendations to C-suite. Integral in crafting team strategy and roadmap. Involved in fundraising and presentations to investors. Delivered machine learning lecture to 60+ people
- **Taylor Statten Camps** Algonquin Provincial Park, Canada
Canoe Trip Guide
Summers 2015, 2016
 - **Canoe Trips:** Led 36- and 50-day canoe trips through remote Canadian wilderness. Responsible for groups of 7 teenage boys. Responsible for planning, safety, and navigation
 - **Camp Maintenance:** Built a new dock; renovated and painted cabins. Leader of roofing crew
- **Bank of Montreal, Capital Markets** Toronto, Canada
Financial Products Analyst
Summer 2014
 - **Fixed Income:** Conducted analyses of various debt products (swaps, swaptions, ABS, MBS). Wrote custom C# algorithm to analyze relationship between delta-hedging frequency and returns for Canadian swaptions; found possible trading opportunities
 - **Sales & Trading:** Compiled daily summaries of trading activity. Reviewed and analyzed sales product pitches. Supported both sales and trading with various data analyses

RELEVANT PROJECTS

- **Twitter Troll Classification:** Project achieving 96% accuracy classifying Twitter trolls using tweets scraped from accounts indicted for meddling in the 2016 U.S. elections
- **Automatic Differentiation:** Python package implementing automatic differentiation, supporting both forward and reverse modes; stochastic gradient descent and Adam optimizers implemented as example use-case
- **Bayesian GANs:** Paper review, implementation, and demo of Bayesian generative adversarial networks (GANs)
- **Tensorflow on Spark:** Training neural networks on a 1.5 TB dataset with Tensorflow on a Spark/Hadoop cluster with AWS Elastic Map Reduce
- **Microbiome Dynamics:** Modeling Granger causality with causal-LSTM model of high-dimensional experimental microbiome time-series data from mice
- **Safe Autonomous Vehicles:** Critical thinking project demonstrating methods (federated learning, differential privacy, secure multi-party computation) and evaluating policies

PROGRAMMING SKILLS

Languages: Python (NumPy, Pandas, scikit-learn, PyTorch, Keras, PyMC3, Boto3), SQL, C

Technologies: AWS (EC2, EMR, S3, Athena), Apache Spark, OpenMP, OpenACC, MPI, Git, Jupyter, Ansible, LaTeX, Markdown
