# Dylan Labatt Randle

dylanrandle.github.io

## **EDUCATION**

• Harvard University, School of Engineering & Applied Sciences

Master of Science in Data Science; GPA: 4.0

Cambridge, MA
Sep 2018 - Present

Mobile: +1-647-641-1994

Email: dylanrandle@g.harvard.edu

o Awards: IACS Scholarship

• University of California at Berkeley, College of Engineering

Berkeley, CA

Bachelor of Science in Industrial Engineering & Operations Research; GPA: 3.9

Sep 2012 - May 2016

o Awards: High Honors at Graduation, Frank Kraft Award for Freshmen, Dean's List (2012-2016), Phi Beta Kappa

## RELEVANT EXPERIENCE

Graduate Research Assistant

• Institute of Applied Computational Science, Harvard University

Cambridge, MA

Nov 2018 - Present

• Neural Networks for Differential Equations: Researching unsupervised Generative Adversarial Networks for solving ordinary and partial differential equations. Researched and developed neural network methods for unsupervised learning of solutions to Reynolds-Averaged Navier Stokes equations

• Hubdoc, Inc. (acquired by Xero Ltd.)

Toronto, Canada

Lead Data Scientist

Jan 2017 - Jul 2018

- o **Production Deep Learning**: Developed and deployed production deep learning system using LSTMs & CNNs for information extraction (i.e. entity recognition and classification) from financial documents. Greatly reduced labor costs (\$1-3MM/year) and increased speed of service (14,000x for 80% of documents). Tech stack: Python, Keras, Postgres, Ansible, AWS
- Business Analytics: Conducted business analyses as needed: e.g. capacity planning of labor, anomaly detection of web scrapers, and prioritization of scraper maintenance. Built reports and data visualizations for intranet
- **Leadership**: Regularly presented results and recommendations to C-suite. Integral in crafting team strategy and roadmap. Coordinated with product and marketing teams. Involved in fundraising and presentations to investors. Delivered machine learning lecture to 60+ people

# • Bank of Montreal, Capital Markets

Toronto, Canada

Financial Products Analyst

Summer 2014

- Fixed Income Derivatives Modeling: Conducted analyses of various debt products (swaps, swaptions, ABS, MBS). Wrote custom C# algorithm to analyze relationship between delta-hedging frequency and returns for Canadian swaptions; found possible trading opportunities
- Sales & Trading: Compiled daily summaries of trading activity. Reviewed and analyzed sales product pitches. Supported both sales and trading with various data analyses

### Relevant Projects

- Twitter Troll Classification: Project achieving 96% accuracy classifying Twitter trolls using tweets scraped from accounts indicted for meddling in the 2016 U.S. elections
- Automatic Differentiation: Python package implementing automatic differentiation, supporting both forward and reverse modes
- Spark Tensorflow: Training neural networks with Tensorflow on a Spark/Hadoop-YARN cluster with AWS Elastic Map Reduce
- Bayesian Generative Adversarial Networks: Paper review, implementation, and demo of Bayesian GANs

#### Programming Skills

Languages: Python (numpy, pandas, scikit-learn, pytorch, keras, pymc3), SQL, C/C++

Technologies: AWS, Spark, MPI, OpenMP, OpenACC, Git
